Supplementary Material S1: Included primary studies
for "Process Mining and Stochastic Modeling for Software Process Forecasting: A Systematic Mapping Study with a Human-Checked LLM-Assisted Screen"

Rodrigo Almeida de Oliveira[a], Juliano de Paulo Ribeiro[a], Edson Emilio Scalabrin[a]

[a] *Pontifícia Universidade Católica do Paraná (PUCPR), Graduate Program in Informatics (PPGIa), Curitiba, Brazil*

This supplement lists the 456 publications of the corpus: identifier, year, role (*coded set* for the 306 that remain from the coded list of 338; *added* for the 150 studies added after the human re-screen), and the family pattern counted in the classification matrix of the main text (Appendix B there). TF-PM is process mining (IC4a), TF-ST a stochastic model (IC4b), TF-FC forecasting (IC4c), and TF-MSR repository mining (IC4d); the 76 title-only studies carry no family mark. The same list is `included_studies_506.csv` in the replication package (Zenodo DOI 10.5281/zenodo.21939600), which also stores, for each identifier, the bibliographic record and the screening decisions.

Table S1: Identifier list of the 456 studies. The family pattern is the one counted in the classification matrix of the main text.

Identifier	Year	Role	Family pattern
